使用注意事项：

- 1、本双向电源为非隔离产品，直流侧配合用电设备使用时，直流侧用电设备须根据自身功率要求配置输入侧的高压直流保险，以确保在直流侧用电设备发生故障（如短路）时能可靠分离，否则将会导致本双向电源直流侧保险损坏；
- 2、本双向电源交流侧上电后，经电源内部软启动电路工作完成（约 5 秒），方能正常输出直流电压，这一阶段严禁启动直流侧用电设备带负载工作，否则将会导致本双向电源软启动电路损坏。

Application Attention:

1. The bidirectional converter is a non-isolated product. When the DC side is used with the electric equipment, the electric equipment need be configured with high voltage DC insurance on the input side according to its own power to ensure reliable separation when the DC side power equipment fails (such as short circuit). Otherwise, it will cause damage to the DC side of the bidirectional converter.
2. After the AC side of the bidirectional converter is powered on, the DC voltage can operate normally until the internal soft-start circuit of the converter is completed (about 5 seconds). During this time, it is strictly forbidden to start the DC side power equipment with any load, otherwise soft start circuit of the bidirectional converter will be damaged.
